It is no secret that the United States is facing an obesity epidemic with the obesity rates continuing to rise year after year. According to the Center for Disease Control, one third of Americans are now obese. It is no longer sufficient to simply point out the

health risks of obesity to our patients as the reason to lose weight. Patients are seeking guidance in terms of what specific diet plan to follow and what foods should be eaten. There are thousands of diets on the market with new ones introduced daily. Not all diet plans have proven results, nor will they work for every patient. More importantly, not all diets marketed to the public are safe to follow for an extended timeframe. In fact, research shows us that diet composition is not the key to long term success, but compliance to a calorie deficient diet is the solution. So how does one choose which diet plan to recommend to patients? Finally, a book for clinicians is here to help answer this question. This book provides information to help patients understand several different research proven diets on the market today including: the Atkins diet, the DASH (Dietary Approaches to Stop Hypertension) diet, the I diet, the Mediterranean diet, Paleo Diets, South Beach, Vegetarian diets, Weight Watchers, and the Zone diet. Each diet is carefully and thoroughly reviewed in this book by some of America's top obesity medicine and weight management specialists to provide health practitioners a knowledge of the diet composition, current research evaluating the diet, typical weight loss results, the pros and cons of the diet as well as which patients would most benefit from each diet plan. This book provides the necessary tools

for clinicians to feel comfortable discussing several of the more popular and scientifically researched diets with patients. This book offers solid information to advise patients, based on their specific health history, on which diet will afford the greatest chance for success.

This book presents recent advances in the integration and the optimization of product design and manufacturing systems. The book is divided into 3 chapters corresponding to the following three main topics : - optimization of product design process (mechanical design process, mass customization, modeling the product representation, computer support for engineering design, support systems for tolerancing, simulation and optimization tools for structures and for mechanisms and robots), -optimization of manufacturing systems (multi-criteria optimization and fuzzy volumes, tooth path generation, machine-tools behavior, surface integrity and precision, process simulation), - methodological aspects of integrated design and manufacturing (solid modeling, collaborative tools and knowledge formalization, integrating product and process design and innovation, robust and reliable design, multi-agent approach in VR environment). The present book is of interest to engineers, researchers, academic staff, and postgraduate students interested in integrated design and manufacturing in mechanical engineering.

Manual contains the worked-out solutions to all of the problems in the text. The purpose of the manual is help the student learn physical chemistry and as an incentive to work problems, not as a way to avoid working problems.

Now in its 2nd edition, *An Introduction to Western Medical Acupuncture* provides a broad evidence-based approach to acupuncture when used as part of modern medicine. Illustrated throughout it gives the practitioner an essential guide for deciding where and how to treat conditions with acupuncture, and how to avoid known risks associated with it.

Ultimately it provides the practitioner with a tool to develop safe and effective practice. For this edition the text has been revised, updated and extensively re-written. A new chapter brings together the understanding of how pain is recognised by the nervous system, and how acupuncture can influence these pathways. This is followed by six chapters providing detailed explanations of the effects and mechanisms of acupuncture, organised according to three recognised treatment approaches - needling to produce local changes, to generate effects at the level of the spinal segment, and to modify the overall function of the nervous system. The chapters on the evidence from research have been also updated. An explanation of the various mechanisms of acupuncture linked to how they can best be activated by needling.
