This book is designed to give guidance on the original, ex-factory, specifications of the coil-sprung utility Land Rovers built between 1983 and 1990. Known to Land Rover as stage 2 models, they were sold as the Land Rover One Ten, Ninety and (later) One Two Seven. James Taylor has taken the first step in undertaking detailed research into the Stage 2 models, and putting together all the known facts in one place. Topics covered include vehicle identification; specification changes in detail; options, accessories and special equipment; conversions and, finally,

have, or simply want to understand the inner workings of a Duramax engine, this handy guide will be a valuable resource for years to come. Author and diesel expert Jason Gonderman takes you through full step-by-step sequences of the removal, disassembly, evaluation, reconditioning, and reassembly of both the 2001-2010 style of engines and the later 2011-2016 models. Also included is a history of all six generations of Duramax engines, as well as a chapter on performance modifications to this versatile platform. General Motors began offering diesel engines in its light-duty pickups in earnest in 1982. The engines were designed and produced by Detroit Diesel, and filled the role in C/K pickups until the 1999 model year. The engines were first a 6.2L naturally aspirated V-8 then grew to 6.5L and added a turbocharger in 1992. The 6.2L diesel achieved better fuel

economy than the company's gasoline V-6 when introduced, and in 1982, fuel economy was a major factor in many people's buying decisions. Fast-forward to the late 1990s, General Motors decided it needed a clean slate in its diesel designs to keep up with the Cummins and Power Stroke engines being offered by the competition. To accomplish this, General Motors partnered with Isuzu to create a brand-new diesel engine that would be the first high-pressure common-rail, direct-injection powerplant to hit the US vehicle market. The initial engine was produced at the newly built plant in Moraine, Ohio, on July 17, 2000. Now, 21 years after the joint venture DMAX Ltd. was created in 1998, more than 2 million Duramax engines have been built. Until the introduction of the Duramax, GM's all-iron, indirect-injected (IDI) 6.5L V-8 produced just 215 hp and 440 ft-lbs of
