The use of dredged material islands by colonial nesting seabirds and wading birds in New Jersey was examined in five major phases. The first located dredged material islands from Manasquan to Cape May Inlets, NJ; the second recorded the past history of all colonial nesting seabirds and wading birds in New Jersey; the third recorded the vegetation patterns and succession on 21 dredged material islands selected for intensive study; the fourth recorded the distribution in 1977 of colonial seabirds and wading birds in the study area and their utilization of dredged material islands; and the fifth documented those factors influencing the use and selection of dredged material islands by birds in 1977. Nineteen management recommendations for dredged material islands are stated, including annual wildlife surveys, careful monitoring of contractor performance, attention to record keeping, preservation of alternative colony sites, rotational use and management of dredged material islands, proportional habitat creation and management, and protection of all islands with bird colonies.

This book presents the proceedings of the 19th International Conference on Interactive Collaborative Learning, held 21-23 September 2016 at Clayton Hotel in Belfast, UK. We are currently witnessing a significant transformation in the development of education. The impact of globalisation on all areas of human life, the exponential acceleration of developments in both technology and the global markets, and the growing need for flexibility and agility are essential and challenging elements of this process that have to be addressed in general, but especially in the context of engineering education. To face these topical and very real challenges, higher education is called upon to find innovative responses. Since being founded in 1998, this conference has consistently been devoted to finding new approaches to learning, with a focus on collaborative learning. Today the ICL conferences have established themselves as a vital forum for the exchange of information on key trends and findings, and of practical lessons learned while developing and testing elements of new technologies and pedagogies in learning.

The difference between students who do well in school and those who struggle usually comes down to one thing-effectiveness in their learning and studying strategies. The Study Max program provides high school teachers with a step-by-step method for helping all students capitalize on their learning strengths to become fully engaged learners.

Who's the New Kid in Chemistry? offers a look at student engagement and teacher best practices through the eyes of an educational researcher. John D. Butler participates in Rhode Island 2013 Teacher of the Year Jessica M. Waters's high school chemistry class, documenting his experiences as they unfold.

The Journal of Evidence-Based Practices for Schools is a leader in publishing research-to-practice articles for educators and school psychologists. The mission of this journal is to positively influence the daily practice of school-based professionals through studies demonstrating successful research-based practices in educational settings. As a result, the editors are committed to publishing articles with an eye toward improving student performance and outcomes by advancing psychological and educational practices in the schools. They seek articles using non-technical language that (1) outline an evidence-based practice, (2) describe the literature supporting the effectiveness and theoretical underpinnings of the practice, (3) describe the findings of a study in which the practice was implemented in an educational setting, and (4) provide readers with information they need to implement the practice in their own schools in a section entitled Implementation Guidelines. The Journal of Evidence-Based Practices for Schools differs from other scholarly journals in that it features articles that demonstrate empirically-based procedures for readers to apply the practice in their setting.
