This is the only book that completely lists accurate technical data for all cars imported into the U.S. market from 1946-2000. With many imports approaching the antique status, this book will be a big seller across all generations of car enthusiasts. From the grandiose European carriages of the late Forties to the hot, little Asian imports of the Nineties, every car to grace American roadways from across the Atlantic and Pacific is carefully referenced in this book. &break;&break;Foreign car devotees will appreciate the attention given to capturing precise data on Appearance and Equipment, Vehicle I.D. Numbers, Specification Charts, Engine Data, Chassis, Technical Data, Options and Historical Information. &break;&break;Collectors, restorers and car buffs will love this key book from noted automotive authors, James Flamang and Mike Covello.

Popular Science gives our readers the information and tools to improve their technology and their world. The core belief that Popular Science and our readers share: The future is going to be better, and science and technology are the driving forces that will help make it better.

Tom Crumm thinks the American auto industry can regain the world leadership it once enjoyed in design, manufacturing and sales of world-class quality vehicles — and profitability. There are nearly a million American jobs at stake and when the ideas in this book spread to component and other industries it becomes fuel for discussion of a turnaround of America's industrial sector and a turnaround of the economy. General Motor's CEO Roger Smith was a visionary and fully realized that change was needed at GM. Tom Crumm played a vital role in the rethinking that was to help the company steer a new course; as a strategic planner he was deeply involved in the creation of the Saturn project in 1985. Many lessons may be learned from Saturn's rise and fall that could be used to further the understanding of how the American manufacturing sector can be restored to its world class position. These include:
- corporate culture and leadership, or the lack of it
- the integration of technology and workers
- employee empowerment and labor relations
- supplier relations and vertical integration
- and sales philosophy and customer satisfaction
The biggest threat to a worker's job is an unprofitable company. Accordingly, the adversarial relationship with the company was not in the best long term interest of union members. The union had to change as well as the company. This point and the whole discussion will be of compelling interest to all who want to know what happened to America's auto making capability. Others have recently tried to explain what went wrong in the auto industry. 'Crash Course' by Paul Ingrassia, for instance, shows that the author had extraordinary access to behind-the-scenes meetings and conversations -- but he has little to say about engineering, manufacturing, or product development. This book addresses just those practical areas where productive change can be made.

A fully revised, updated edition provides authoritative evaluations of used car reliability and value, in a guide that includes helpful ratings charts. Original.
