Praise for Be the Solution "In the past, many believed you either went into 'public service' to do good, or you 'went into business' to make money. Few realized that the long-term success of business depends on serving people, not making money. Few realized that perhaps the best way to serve the public was through free enterprise. Whole Foods Market founder John Mackey, visionary thinker Michael Strong, micro lender Muhammad Yunus, and a few others understand these truths. Be the Solution is the best single book to read to understand the emerging ways in which entrepreneurs can change the world." -Gary Hoover, serial entrepreneur, founder of Hoover's Business Information Service, Hooverworld.com "Michael Strong speaks the truth. A must-read for our new American government." -Sam Wily, founder, Green Mountain Energy; author of 1,000 Dollars and an Idea "This book is totally fantastic. Treat your mind to a feast. Use it to tune your vision towards what really works." -Charles Harper, Senior Executive VP, Chief Strategist, John Templeton Foundation "Perhaps more than ever before, young people today are motivated by the desire to make the world a better place. Unfortunately, many have little idea about how to do it, and their educational studies provide them with little direction. In contrast, this book is a road map about how we can get from where we are to where we want to be-to a more peaceful, more prosperous, and more environmentally sound world. Plus, it is exciting, uplifting, and adventurous. Indeed, it provides the recipe for a better world." -Dr. James Gwartney, coauthor of Economic Freedom of the World: 2007 Annual Report; Gus A. Stavros Eminent Scholar Chair at Florida State University "This is a very thoughtful and timely book that asks us to look around-and to look within-the amazing opportunities that entrepreneurship offers to the world. I recommend this book to anyone interested in finding solutions to the current crisis." -Giancarlo Ibarquien, Executive President, Universidad Francisco Marroquin "At last, a book about the heart of capitalism as a force for creating good in the world for solving many of our tough societal problems. I hope our political leaders read it." -R. Edward Freeman, Olsson Professor of Business Administration, Academic Director, Business Roundtable Institute for Corporate Ethics, University of Virginia

From Problem Solving To Solution Design Creating solutions to solve problems can often prove very difficult to accomplish, even for seasoned Solution Designers. Complex organizational problems have several stakeholders, endless variables, and a myriad of possible solutions. It's hard enough to figure out where to start, and even harder to realize what the perfect, mutually-beneficial solution is. With their combined tenure of over fifty years, J. Eduardo Campos and Erica W. Campos present their Solution-Designing expertise in From Problem Solving to Solution Design so that you can learn from their successes (and their failures) to craft sustainable solutions for complex problems. Specifically, you will learn how to implement the I.D.E.A.S. framework that they have been perfecting over the years, which includes five critical checkpoints that any Solution Designer must hit to create solutions that are successfully envisioned, negotiated with stakeholders, and implemented to last over time. IDENTIFY THE ESSENTIAL PROBLEM AND PRIORITIZE YOUR ACTIONS TO SOLVE IT. DESIGN SOLUTION OPTIONS ALIGNED TO YOUR GOALS. ENGAGE YOUR STAKEHOLDERS IN THE SOLUTION AND INFLUENCE THE DECISION-MAKING PROCESS. ACT ON THE AGREED-UPON RECOMMENDATIONS AND EXECUTE YOUR GOVERNANCE MODEL. SUSTAIN THE IMPLEMENTED SOLUTION BY CREATING A FEEDBACK LOOP. Treat this book as your field guide: it offers clear checkpoints for you to assist your organization in designing effective solutions for complex problems.

• New York Times bestseller • The 100 most substantive solutions to reverse global warnings, based on meticulous research by leading scientists and policymakers around the world "At this point in time, the Drawdown book is exactly what is needed: a credible, conservative solution-by-solution narrative that we can do it. Reading it is an effective inoculation against the widespread perception of doom that humanity cannot and will not solve the climate crisis. Reported by-effects include increased determination and a sense of grounded hope." -per Eспен Stokes, Author, What We Think About When We Try Not To Think About Global Warming "There's been no real way for ordinary people to get an understanding of what they can do and what impact it can have. There remains no single, comprehensive, reliable compendium of carbon-reduction solutions across sectors. At least until now. . . . The public is hungry for this kind of practical wisdom." -David Roberts, Vox "This is the ideal environmental sciences textbook-only it is too interesting and inspiring to be called a textbook." -Peter Kareiva, Director of the Institute of the Environment and Sustainability, UCLA In the face of widespread fear and apathy, an international coalition of researchers, professionals, and scientists have come together to offer a set of realistic and bold solutions to climate change. One hundred techniques and practices are described here-some are well known; some you may have never heard of. They range from clean energy to educating girls in lower-income countries to land use practices that pull carbon out of the air. The solutions exist, are economically viable, and communities throughout the world are currently enacting them with skill and determination. If deployed collectively on a global scale over the next thirty years, they represent a credible path forward, not just to slow the earth's warming but to reach drawdown, that point in time when greenhouse gases in the atmosphere peak and begin to decline. These measures promise cascading benefits to human health, security, prosperity, and well-being-giving us every reason to see this planetary crisis as an opportunity to create a just and livable world.

A Solution to Solutions: A Practical Guide to Understanding and Preparing Solutions in Biological Chemistry teaches students the background and theory of laboratory calculations and practices, provides clear instructions and examples to help complete specific calculations, and gives students confidence in their laboratory skills. Students learn terminology, concentration units, and how to convert units. They study basic chemistry, chemical equilibria, multicomponent assays, laboratory measurements, and the dangers of 'rough handling' in the lab. Chapters and subchapters are divided into sections focusing on specific tasks. Math anxiety is reduced by a clear, concise review of basic algebra and the necessary logarithms. Laboratory exercises feature success tips and calculation exercises include a 'reality check' component that encourages students to consider whether or not their calculations make real-world sense. A Solution to Solutions is a class-tested, accessible, and student-friendly resource that provides all the skills necessary to survive and succeed in laboratory work. It is well-suited to biology, chemistry, and biochemistry laboratory courses, particularly those at level 200 and above.

Solution architecture is concerned with the design and definition of (information technology) solutions so they can be subsequently implemented, used, operated and supported securely and efficiently. The solution exists to operate business processes in order to achieve business objectives, meet a business need and deliver business value. Solution architecture is concerned with engaging with the originating business function looking for the solution to create a solution vision and design a solution that meet their needs, subject to a range of constraints such as cost and affordability, time to deliver and organisational standards. The solution must exist as a coherent whole.Solutions must be designed consistently across the solution landscape and make optimum use of appropriate technologies. Solution architecture must focus on creating usable and useful solutions. Solution architecture must have a standard reliable approach to business engagements and the design of solution that emerge from them. Solution architecture must work collaboratively with other information technology functions - other architecture roles, business analysis and service management - to ensure continuity along the solution delivery journey.Effective solution architecture involves:-Have a depth and breadth of solution delivery and technical experience to be able to identify solution design options quickly-Being able to understand the detail of the solution while maintaining a view of the wider (and higher) context of the business need for the solution and being able to explain both these views of sets of information-Being able to communicate effectively with all parties - technical and business - involved in the solution design and delivery journey, assist with decision-making, be realistic and make appropriate compromises and design choices in order to create the best solution design-Being able to apply technology appropriately and with selective innovation (and the desire to constantly acquire new knowledge and ways of applying technology)-Being involved in the solution delivery journey along its entire length-Being able to be the solution advocate and subject matter expertThis book is aimed at a variety of potential readers: -Existing solution architects who want to have a more theoretical and a broader understanding of their role-Existing or new managers of solution architecture functions who want to create a high-performing practice within their organisations and who want to articulate the benefits and value solution architect can contribute to the information technology function and the wider business and the potential it can offer to the business organisation-Managers of information technology functions who want to understand what solution architecture is, where it fits into the wider architecture context and disciplines and solution delivery and operation and the value it can contribute to both the information technology function and the wider business-Other information technology architects who want to understand how the architecture disciplines can work together to deliver value-Business analysts and managers of business analysis functions who want to understand how they can work more closely with the solution architecture function in order to provide the business with a better overall service-Other information technology personnel who want to move into solution architecture and who want to understand what it is-Consulting organisations and individuals who want to develop and offer value-adding solution architecture services

"At last-a global plan that actually adds up.-"-James Hansen, former director, NASA Goddard Institute for Space Studies The world must reach negative greenhouse gas emissions by 2050 to avoid the most catastrophic effects of climate change. Yet no single plan has addressed the full scope of the problem-until now. In The 100% Solution, Solomon Goldstein-Rose--a leading millennial climate activist and a former Massachusetts state representative--makes clear what needs to happen to hit the 2050 target: the manufacturing booms we must spur, the moonshot projects we must fund, the amount of CO2 we'll have to sequester from the atmosphere, and much more. Most importantly, he shows us the more prosperous and equitable world we can build by uniting the efforts of activists, industries, governments, scientists, and voters to get the job done. This is the guide we've been waiting for. As calls for a WWII-scale mobilization intensify--especially among youth activists--this fully illustrated, action-oriented book arms us with specific demands, sets the stakes for what our leaders must achieve, and proves that with this level of comprehensive thinking we can still take back our future.
